

Dear Parents,

As part of our ongoing efforts to always be aware of the safety and security of our students we are reviewing all medical records. We are especially looking for information on any of our students who have allergies and/or asthma.

Ms.Brown in our Medical Office and Mrs.Roman in our office keep details and records on all children who have these conditions. Information about these issues should be shared with the school as soon as school begins each September. It critical that they be informed and kept up to date on any changes that take place especially changes in Doctors orders. Requests for updated information must not be ignored.

If your child has allergies or any other chronic medical condition it is not enough to have a conversation with a classroom teacher. The parent must inform the Nurse and the Office as well. Most of the time there are Medical Protocols that need to be followed in a timely manner at the start of the school year.

If your child has any allergies or any medical condition that is an ongoing condition and you have not contacted our medical or school office please get in touch with us as soon as possible.

Many New Yorkers were shocked by the recent tragic incident that occurred in the Bronx. All schools have become more aware of the importance of all staff members being informed about how to respond to emergencies. This includes faculty, kitchen staff, office personnel and all workers in the building. At GSS we have arranged for updated training to take place and for everyone to know how to follow emergency protocols in different situations.

The safety and well being of all the students in our care is of utmost concern to us and we appreciate all your help and assistance with this important matter.

Sincerely,

Mrs.G.Lavery  
Principal

Mrs.R.Walsh  
Assistant Principal
